

FOREARM CRUTCH

Sizing and Using Forearm/Elbow Crutches

Ensuring the Correct Height

- Stand with your arms relaxed by your side wearing your usual shoes. The handgrip of the crutches should align with your wrist joint (the bottom crease of your wrist) when your arm is by your side. This should allow for your elbow to be slightly bent (about 30 degrees of flexion) when holding the handgrips (see illustrations).
- To adjust the height, loosen the collar underneath the adjustment holes. Depress the spring buttons on the crutch and lengthen or shorten accordingly. Tighten the collar to secure the adjustment.
- The cuff of the crutches should be adjusted to 1-2 inches below the bend of the elbow.

Safety

- Ensure that adjustment spring buttons are fully engaged and aligned in the proper adjustment hole of each crutch before use and ensure all collars are screwed on tightly.
- Cuffs are designed to add stability to the forearm crutch. They are not intended to support the user's weight.
- Check the rubber tip on the end of your crutches regularly as it will wear with use and need replacing in order to prevent the risk of slips and fall.

Walking Technique

- Squeeze the crutches between your upper arm and ribs. Take the weight through your hands.
- Move the crutches forward, then move your sore leg forward. Put your foot even with the crutches.
- Put as much weight as you are allowed on the sore leg, taking the rest of the weight through your arms and hands (press hard on the hand grips).
- Step past with your stronger leg.

Managing Stairs

- Whenever possible, use a handrail. Place one crutch under one arm and use the handrail with the other arm for support.
- Going up: step up with the stronger leg, then the sore leg, and lastly bring up the crutch.
- Going down: lower crutch down to the step below, move your sore leg down and then bring your stronger leg down.

How Do I Use the Forearm Crutches?

- A physician or therapist should instruct the user on the proper adjustment and use of the crutches.

- ! WARNING** Ensure that spring buttons are fully engaged and aligned in the proper adjustment hole of each crutch before use.
- ! WARNING** Cuffs are designed to add stability to the forearm crutch. They are not intended to support the user's weight.
- ! WARNING** Do not subject forearm crutches to sudden impacts or jolts.

How Do I Care For the Forearm Crutches?

- Clean the hand grips with a mild soap, detergent or household cleaner.
- Periodically check the rubber tips for rips, tears, cracks or worn tread. If any of these conditions are found, contact the Red Cross immediately.

Product Specification

Adult Forearm Crutches
Orthopedic Handle For Comfort
Dimensions (h x w x d) : 37"-45" x 8.25" x 1.5"
Weight Capacity : 250 lbs

Height Adjustment In 1" Increments
For Individuals 5' 2" To 6' 2" In Height
Designed For Long-Term Use
